                                                                GF-1 analogues used pref. (1) lack 1-5 N-terminal amino aicds or (ii) have Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-1 analogue pref. comprises the N-terminal 16F-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. Comprises the N-terminal given in R51450-53.

Esp. Long R3 IGF-1, given in R51454 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid
                                                                                                                                                                                                                                                         Gaps
                        Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-like growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3 weeks after hatch.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-like growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Increasing growth of birds - with insulin-like growth factor delivered to the egg before hatching esp. for increasing wt. gain

weeks after hatch.

IGF-1 analogues used pref. (1) lack 1-5 N-terminal amino aicds or (i1) have Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-1 analogue pref. comprises the N-terminal given in R51439-49.

IGF-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. comprises the N-terminal given in R51450-53.

Esp. Long R3 IGF-1, given in R51454 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-like growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3 weeks after hatch.

IGF-1 analogues used pref. (i) lack 1-5 N-terminal amino aicds or (ii) have Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced given in R51439-49.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Increasing growth of birds - with insulin-like growth factor delivered to the egg before hatching esp. for increasing wt. gain

W56171-248 represent anti-inflammatory tripeptides of the invention.
They are derived from the formulae:
They can be covaled from the formulae.

Cyclic derivatives of the peptides also function as anti-inflammatory
agents. The peptides can be covalently linked to one another either
Circetly or through a spacer. The peptides and their derivatives have
macrophage inhibitory and T-cell inhibitory activity and thus,
mati-inflammatory activity. The peptides and compositions have
anti-inflammatory activity. The peptides and scapinat a cellular and
humoral immune response, including a response not associated with
T-cells to adhere to extracellular matrix components and fibronectin, as
well as up-requiated fas receptor expression in T-cells. They can be used
to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

IGF-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. comprises the N-terminal given in R51450-53.

Esp. Long R3 IGF-1, given in R51454 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A peptide (W19847) comprises the three N-terminal amino acid residues of human interleukin-12 (IL-12) p40 subunit. It is encoded both by native human p40 cDNA (772096) and by a primer (772095) based on the native sequence. PCR amplification has been used to amplify p40 cDNA. A fusion protein comprising the p40 subunit and human Fc gamma-1 (see also W19853) was expressed in E. coli. This fusion protein has a longer in vivo half-life than native p40 and can be used as an immunosuppressive (e.g. to treat autoimmune diseases or to inhibit graft rejection) or to treat or prevent endotoxin-induced shock.
                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Fusion protein containing interleukin-12 p40 sub-unit - has increased stability, used to inhibit graft rejection, or treat autoimmune disease and endotoxin-induced shock

well as up-regulated fas receptor expression in T-cells. They can be used to inhibit unwarted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cyclic derivatives of the peptides also function as anti-inflammatory agents. The peptides can be covalently linked to one another either directly or through a spacer. The peptides and their derivatives have macrophage inhibitory and T-cell inhibitory activity and thus, anti-inflammatory activity. The peptides and compositions have anti-immune activity, i.e. inhibitory effects against a cellular and humoral immune response, including a response not associated with inflammation. The peptides also inhibit the ability of macrophages and T-cells to adhere to extracellular matrix components and fibronectin, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anti-inflammatory peptides and derivatives - used for treating, e.g arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                W56171-248 represent anti-inflammatory tripeptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      W56171-248 represent anti-inflammatory tripeptides of the invention.
They are derived from the formulae:
Xaa-Glu-Arg, Arg-Glu-Xaa, Xaa-Arg-Glu, or Glu-arg-Xaa, where
Xaa = any amino acid residue.

Cyclic derivatives of the peptides also function as anti-inflammatory
agents. The peptides can be covalently linked to one another either
Circuly or through a spacer. The peptides and their derivatives have
macrophage inhibitory and T-cell inhibitory activity and thus,
anti-inflammatory activity. The peptides and compositions have
anti-inflammatory activity i.e. inhibitory effects against a cellular and
humoral immune response, including a response not associated with
C inflammation. The peptides also inhibit the ability of macrophages and
T-cells to adhere to extracellular matrix components and fibronectin, as
well as up-regulated fas receptor expression in T-cells. They can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Anti-inflammatory peptides and derivatives - used for treating, e.g. arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease
                                                                                                                                                                                                        Anti-inflammatory; macrophage inhibitory activity; fibronectin; T-cell inhibitory activity; adherence; extracellular matrix; up-regulation; fas receptor expression; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Indels

                                                                                                                                                                                                      Peptides W88033-39 are used in the hair composition of the invention. The specification describes a hair composition that comprises at least one oligopeptide having more than two cysteine residues and more than three amino acid residues of the same kind (except cysteine) and a reducing agent. The composition is useful for styling hair to take various shapes and waves safely and effectively.
                                                                                                              composition for hair - comprises oligopeptide having more than 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Biostatin preparation in high yield by solid synthesis, including closure of disulfide bridge before cleavage from support, useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     'note= "Thr(tBu) with C-terminal amide group"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                             They are derived from the formulae:

Xaa -[an-Arg, Arg-falu xaa. Xaa-Arg-falu, or Glu-arg-Xaa, where
Xaa = an Arg, Arg-falu xaa. Xaa-Brg-falu, or Glu-arg-Xaa, where
Xaa = any amino acid residue.

Cyclic derivatives of the peptides also function as anti-inflammatory
agents. The peptides can be covalently linked to one another either
directly or through a spacer. The peptides and their derivatives have
macrophage inhibitory and T-cell inhibitory activity and thus,
anti-inflammatory activity. The peptides and compositions have
anti-inflammatory activity. I.e. inhibitory effects against a cellular and
humoral immune activity, i.e. inhibitory effects against a cellular and
humoral immune response, including a response not associated with
inflammation. The peptides also inhibit the ability of macrophages and
r-cells to adhere to extracellular matrix components and fibronectin, as
well as up-regulated fast receptor expression in T-cells. They can be used
to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                   Anti-inflammatory peptides and derivatives - used for treating, e.g. arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease

This invention describes a novel method for the solid phase (SP)

Synthesis of biostatin (TT 232) (I) which includes closing the disulfide
bridge by oxidiation of the completely or partially constructed peptide
while still bonded to the solid phase. The products of the invention have
cytostatic activity and are tyrosine kinase inhibitors. (I) inhibits the
tyrosine kinase activity of various human stomach cancer cell lines and
thus inhibits cellular proliferation. The heptapeptide (I) described in
the invention is a somatostatin analog which shows strong antitumor
the invention is a somatostatin analog which shows strong antitumor
cativity in vitro and in vivo. The SP synthesis method gives (I) is more
easily and in markedly higher yield than by the method of EP50580, in
which the cyclization is carried out after cleaving the peptide from the
cell resin. The solution method is also a simple synthesis of (I) in high
yield; typically the tert-butyl-protected precursor can be oxidized in
yield; typically the tert-butyl-protected precursor can be oxidized in
synthesis of biostatin TT232 described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 307, Application US/08486397

Patent No. 5866542

GENERAL INFORMATION

APPLICANT: George P. Vlasuk, Patric H. Stanssens,
APPLICANT: Joris H.L. Mensens, Marc J. Lauwereys,
APPLICANT: Yves R. Larcche, Laurent S. Jespers,
APPLICANT: Peter W. Bergum

TITLE OF INVENTION: NEMATODE-EXTRACTED ANTICOAGULANT

TITLE OF INVENTION: NEMATODE-EXTRACTED ANTICOAGULANT

TITLE OF INVENTION: NEMATODE-EXTRACTED ANTICOAGULANT

TITLE OF INVENTION: PROTEIN

NUMBER OF SEQUENCES: 357

CORRESPONDENCE ADDRESS:
ADDRESSEE: G33 West Fifth Street

STREET: Suite 4700

CITY: Los Angeles
STREET: California

-!- FUNCTION: THE IDENTITY OF THE GLYCOPROTEIN FROM WHICH THIS PEPTIDE
IS DERIVED IS UNKNOWN. NO PHYSIOLOGICAL FUNCTION HAS BEEN
ATTRIBUTED. AN ERYTHROCYTE MEMBRANE GLYCOPEPTIDE HAVING A
SIMILAR STRUCTURE HAS ALSO BEEN FOUND.

The peptides are angiogenic and have corresp, applications, eg for the healing of wounds and burns. Their relative shortness means that they pose fewer synthesis problems than the entire EGF molecule. They can be admin. Singly or association with each other or in association with an angiogenic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      carrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The article for inactivating a toxic material comprises a solid carrier bearing a first receptor which binds the target ligand and a second receptor which degrades the target ligand. This synthetic peptide is a preferred first receptor. The article may be used for covering surfaces to protect or decontaminate the surface. The article is esp. adequating toxic organic cyds, esp. organophosphorous cyds., (eg pesticides and nerve poisons, bacteria and viruses, in environmental, chemical, military and industrial settings.
                                                                                                  like activity. The new peptides comprise a sequence with corresp. to a central portion of the insulin B chain (esp. B15-27) and a cysteine-conty. peptide with an AA sequence corresp. to a terminal portion of the insulin A chain (esp. A1-7). The new cysteine peptides are antidiabetic agents with appreciable insulin activity (lower than that of insulin itself) and low antigenic activity.
                                                                                    The inventors claim the prepn. of new cysteine peptides with insulin-

weeks after hatch.

IGF-1 analogues used pref. (i) lack 1-5 N-terminal amino aicds or (ii) have Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-1 analogue pref. comprises the N-terminal given in R51439:49.

IGF-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. comprises the N-terminal given in R51450-53.

Esp. Long R3 IGF-1, given in R51454 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-like growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3 weeks after hatch.

IGF-1 analogues used pref. (i) lack 1-5 N-terminal amino aicds or (ii) have Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced given in R51439-49.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Insulin-like growth factor; IGF-1; IGF-2; bird; chicken; egg;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                硆
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                            TGF-1 analogues used pref. (i) lack 1-5 N-terminal amino aicds or 1GF-1 analogues used pref. (i) lave Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-1 analogue pref. comprises the N-terminal given in R51439-49.

IGF-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. comprises the N-terminal given in R51450-53.

Esp. Long R3 IGF-1, given in R51451 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                  Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-11ke growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3 weeks after hatch.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Growth of birds is increased by (a) admin. to the bird, in ovo, insulin-like growth factor (IGF)-1 or -2 or their active analogues; (b) incubating to hatch and (c) growing the birds for at least 3

IGF-2 analogues used pref. have Glu(2) or Glu(3) absent or replaced by Gly, Gln, Leu, Arg or Lys, partic. Gly and the Thr normally adjacent to Glu can be replaced by Arg or Gly. The IGF-2 analogue pref. comprises the N-terminal given in R51450-53. Esp. Long R3 IGF-1, given in R51454 is used. It is the full human IGF-1 sequence with Arg replacing Glu(3) and a 13 amino acid

It is encoded both by native human p40 cDNA (T72095) and by a primer (T72095) based on the native sequence. PCR amplification has been used to amplify p40 cDNA. A fusion protein comprising the p40 subunit and human Fc gamma-1 (see also W19853) was expressed in E. coll. This fusion protein has a longer in vivo half-life than native p40 and can be used as an immunosuppressive (e.g. to treat autoimmune diseases or to inhibit graft rejection) or to treat or prevent endotoxin-induced shock.
                                                                                                                                                                                                                        ö

                                                                                                                           Again, authorized of the peptides also function as anti-inflammatory agents. The peptides can be covalently linked to one another either directly or through a spacer. The peptides and their derivatives have macrophage inhibitory and T-cell inhibitory activity and thus, anti-inflammatory activity. The peptides and compositions have anti-inflamma activity, i.e. inhibitory effects against a cellular and humoral immune response, including a response not associated with inflammation. The peptides also inhibit the ability of macrophages and T-cells to adhere to extracellular matrix components and fibronectin, as well as up-regulated fas receptor expression in T-cells. They can be used to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
W56171-248 represent anti-inflammatory tripeptides of the invention. They are derived from the formulae:
Xaa-Glu-Arg, Arg-Glu-Xaa, Xaa-Arg-Glu, or Glu-arg-Xaa, where
any amino acid residue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     They are derived from the formulae:

Xaa Glu-Axq, Axq-Glu-Xaa, Xaa-Axq-Glu, or Glu-arg-Xaa, where
Xaa any amino acid residue.

Xaa any amino acid residue.

Cyclic derivatives of the peptides also function as anti-inflammatory agents. The peptides and their derivatives have macrophage inhibitory and T-cell inhibitory activity and thus anti-inflammatory activity. The peptides and compositions have anti-inflammation activity. The peptides and compositions have anti-inmune activity. In the peptides and compositions have inflammation. The peptides also inhibit the ability of macrophages inflammation. The peptides also inhibit the ability of macrophages and T-cells to adhere to extracellular matrix components and fibronectin, as well as up-regulated fas receptor expression in T-cells. They can be used to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anti-inflammatory peptides and derivatives - used for treating, e.g. arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      W56171-248 represent anti-inflammatory tripeptides of the invention

They are derived from the formulae:

Xaa-Glu-Arg, Arg-Glu-Xaa, Xaa-Arg-Glu, or Glu-arg-Xaa, where

Xaa = any amino acid residue.

Cyclic derivatives of the peptides also function as anti-inflammatory
agents. The peptides can be covalently linked to one another either
agents. The peptides can be covalently linked to one another either
alizectly or through a spacer. The peptides and their derivatives have
macrophage inhibitory and T-cell inhibitory activity and thus,
anti-inflammatory activity. The peptides and compositions have
anti-inmune activity, i.e. inhibitory effects against a cellular and
humoral immune response, including a response not associated with
inflammation. The peptides also inhibit the ability of macrophages and
T-cells to adhere to extracellular matrix components and fibronectin, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11 as up-regulated fas receptor expression in T-cells. They can be used
inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Anti-inflammatory peptides and derivatives - used for treating, e.g. arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     W56171-248 represent anti-inflammatory tripeptides of the invention
Anti-inflammatory; macrophage inhibitory activity; fibronectin; T-cell inhibitory activity; adherence; extracellular matrix; up-regulation; fas receptor expression; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Anti-inflammatory, macrophage inhibitory activity, fibronectin, r-cell inhibitory activity, adherence; extracellular matrix; up-regulation, fas receptor expression; inflammation.

                                                                                                                                                                                        Peptides W88033-39 are used in the hair composition of the invention. The specification describes a hair composition that comprises at least one oligopeptide having more than two cysteine residues and more than three amino acid residues of the same kind (except cysteine) and a reducing agent. The composition is useful for styling hair to take various shapes and waves safely and effectively.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Biostatin preparation in high yield by solid synthesis, including closure of disulfide bridge before cleavage from support, useful as antitumor agent -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     up-regulated fas receptor expression in T-cells. They can be used bit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                   W56171-248 represent anti-inflammatory tripeptides of the invention. They are derived from the formulae:

Xaa Glu-Arg, Arg-Glu-Xaa, Xaa-Arg-Glu, or Glu-arg-Xaa, where
Xaa = any amino acid residue.

Cyclic derivatives of the peptides also function as anti-inflammatory agents. The peptides can be covalently linked to one another either directly or through a spacer. The peptides and their derivatives have macrophage inhibitory and T-cell inhibitory activity and thus, anti-inflammatory activity. The peptides and compositions have anti-inflammatory activity. The peptides and compositions have humoral immune activity, i.e. inhibitory effects against a cellular and humoral immune response, including a response not associated with inflammation. The peptides also inhibit the ability of macrophages and reals a calcular matrix components and fibronectin, as used to a constitution of the peptides also inhibit and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                Anti-inflammatory peptides and derivatives - used for treating, e.g. arthritis, ulcerative colitis, auto-immune disease, allergy asthma, shock, HIV infection, transplant rejection or Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels

This invention describes a novel method for the solid phase (SP)

Synthesis of biostatin (TT 232) (I) which includes closing the disulfide

Dridge by oxidation of the completely or partially constructed peptide

while still bonded to the solid phase. The products of the invention have

Cytostatic activity and are tyrosine kinase inhibitors. (I) inhibits the

tyrosine kinase activity of various human stomach cancer cell lines and

thus inhibits cellular proliferation. The perpapentide (I) described in

the invention is a somatostatin analog which shows strong antitumor

ceasily and in markedly higher yield than by the method of EP50580, in

which the cyclization is carried out after cleaving the peptide from the

cesin. The solution method is also a simple synthesis of (I) in high

cresin. The solution method is also a simple synthesis of (I) in high

cycled; typically the terributyl protected precursor can be oxidized in

a yield of 70-80%. Y51896-Y51900 represent peptides used in the

synthesis of biostatin TT232 described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 23,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

Patent No. 5998204

GENERAL INFORMATION:
APPLICANT: Trien, Roger Y.
APPLICANT: Miyawaki, Atsushi
TITLE OF INVENTION: FLUORESCENT PROTEIN SENSORS FOR
TITLE OF INVENTION: DETECTION OF ANALYTES
NUMBER OF SEQUENCES: 61
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
STREET: 4225 Executive Square, Suite 1400
CITY: La Jolla
